(54) Title: BULK VENDING MACHINE

(57) **Abstract:** A bulk vending machine provides a dispensing conduit having a revolving mouth that floats on top of a heap of articles in the product bin. The mouth is movable between a horizontal orientation, in which the mouth can scoop articles off of the surface of the heap, and a vertical orientation in which a throat of the dispensing conduit opens to allow an article which has been scooped into the mouth to fall through the dispensing chute. Revolution of the dispensing conduit by turning the handle causes the mouth to revolve around the heap of articles, scooping up one or more articles in its path.
